

Installation Technician

Full-time · Based in Oklahoma City, Oklahoma, with travel to customer sites

About Us

We're a small, family-owned company that builds and installs cloud-based SCADA and IoT monitoring solutions for water and wastewater systems. We operate like a real family — close-knit, supportive, and invested in our people. Every contribution here matters.

The Role

We're hiring a skilled, self-reliant Installation Technician to travel to customer sites — water and wastewater municipalities, rural water districts, water corps, and similar utilities — and install our SCADA and IoT monitoring technology. We ship pre-built SCADA panels; you'll handle everything it takes to get them mounted, wired, powered up, and verified working before you leave the site.

You are the face of our company in the field. Fanatical customer service is our standard, so professionalism, clear communication, and a customer-first attitude are just as important as technical skill.

What You'll Do

- Travel to customer locations to install pre-built SCADA panels and related equipment
- Handle site fabrication: set poles in concrete for outdoor applications and build Unistrut frames for indoor installations
- Mount panels and wire up power, following applicable electrical codes and safe work practices
- Wire controls and field devices — VFDs, contactors, sensors, floats, transducers, and related instrumentation
- Read and work from wiring schematics and installation documentation
- Verify power-up and complete startup checklists to confirm every system is fully operational
- Troubleshoot electrical, control, and communication problems on-site until the job is done right
- Represent the company professionally with customers — explain what you're doing, answer questions, and leave every site clean and every customer confident
- Document completed work, note any deviations from drawings, and report issues back to the engineering team

What We're Looking For

- Strong electrician skills: wiring, conduit, terminations, and electrical troubleshooting
- Ability to read wiring schematics and troubleshoot electrical circuits methodically
- Hands-on fabrication ability (concrete pole sets, Unistrut framing, drilling, mounting)

- Strong computer skills — comfortable with laptops, configuration tools, and networked devices in the field
- A professional, customer-focused attitude — fanatical customer service is our standard
- Solid troubleshooting instincts: able to diagnose problems independently and see them through to resolution
- Willingness to travel to customer sites, including overnight travel as projects require
- Comfortable working outdoors in varying weather and in utility environments (lift stations, well sites, treatment plants)
- A valid driver's license and clean driving record
- Ability to lift and handle equipment, work on ladders, and perform physical installation work safely

Nice to Have

- Programming experience (PLC, scripting, or general software) — strongly preferred
- Experience with SCADA, telemetry, instrumentation, or industrial controls
- Experience working in or around water/wastewater utilities
- Electrical license or journeyman experience
- Experience with VFD setup and motor controls

Details

Employment type: Full-time

Location: Based in Oklahoma City, Oklahoma, with travel to customer sites

Compensation: Based on experience
