

Panel Technician

Full-time · On-site in Oklahoma City, Oklahoma

About Us

We're a small, family-owned company that builds and installs cloud-based SCADA and IoT monitoring solutions for water and wastewater systems. We operate like a real family — close-knit, supportive, and invested in our people. Every contribution here matters.

The Role

We're hiring a Panel Technician to build the automation panels at the core of our SCADA solutions. Working from wiring schematics and build documentation, you'll lay out, assemble, and wire control panels accurately and to a high standard of workmanship — the panels you build ship straight to customer sites, so quality and attention to detail matter on every job. Panel-building experience is preferred, but we'll consider a motivated candidate with solid fundamentals who's ready to learn our way of doing things.

What You'll Do

- Build automation panels from start to finish: backplane layout, component mounting, wire routing, and terminations
- Read and work from wiring schematics, panel drawings, and build documentation
- Accurately wire panels according to documentation — correct gauge, color, labeling, and routing
- Use power tools and shop equipment to cut, drill, and modify enclosures and backplanes
- Perform point-to-point checks and power-up testing to verify every panel matches its drawings
- Flag documentation errors or build issues to engineering and help get them corrected
- Maintain clean, professional workmanship — tidy wire runs, proper labeling, and organized panels
- Keep the panel shop organized and help manage parts and materials for active builds

What We're Looking For

- Ability to read wiring schematics and electrical drawings
- Skill and care in wiring: clean terminations, accurate point-to-point work, proper labeling
- Comfort using power tools and shop equipment safely
- Strong attention to detail and pride in workmanship
- Ability to follow documentation precisely and catch discrepancies
- A reliable, team-oriented attitude

Nice to Have

- Panel-building or industrial control panel experience — preferred
- Familiarity with control components: PLCs, VFDs, contactors, relays, terminal blocks, power supplies
- Knowledge of UL 508A or similar panel-building standards
- Electrical or electronics training/certification

Details

Employment type: Full-time

Location: On-site in Oklahoma City, Oklahoma

Compensation: Based on experience
